BONEVET GJAKOVA

Help Children in Kosovo Learn, Make and Create

2027 scholarship program / Gjakova, Kosovo

A place to try an idea

For a child who wants to build a robot or find out why a wheel sticks, the cost of an after-school class can put that first experiment out of reach. In 2027, BONEVET Gjakova aims to offer 100 children aged 5–11 a place in its hands-on classes, free of charge to their families.

What happens in class

Children explore science, technology and art by making things together. A child might sketch a design, assemble it with a classmate, then change one part and test it again. Mentors guide the work. Our educational psychologist helps train mentors to adapt activities to each child's age and support children when a first attempt proves difficult.

How the scholarships add up

$9,000	$1,278	$10,278
scholarship budget	estimated fees	fundraising goal

Each place costs $90 to provide. Our goal includes 100 places and the estimated GlobalGiving fees for donations made through the project page.

Where a first class can lead

All four winners of BONEVET's 2026 Academy of Makers first attended our classes as children. For the next group, our aim is that the confidence to ask questions, work with others and try again goes with them into school and beyond.
